

Traffic IQ Professional - Data Sheet

Traffic IQ Professional from idappcom

Your network security defences are constantly evolving to defend against the increasing level of threat sophistication used by the latest attacks and exploits.

The task of auditing and validating your security infrastructure whilst conforming to security compliance standards is also becoming increasingly difficult, time consuming and expensive to accomplish. However without doing these tests your business might be exposed to unnecessary risk.

Traffic IQ Professional

A unique industry approved software solution for auditing and verifying the recognition and response capabilities of your corporate security defences.

idappcom's Traffic IQ Professional solution puts security back in your control. It enables security professionals to quickly and easily audit and validate the behaviour of security devices by generating standard application traffic or attack traffic between two virtual machines.

The unique features and packet transmission capabilities of Traffic IQ Professional make the task of reliably auditing, validating and proving security compliance very easy and quick to complete. Traffic IQ Professional is extremely versatile and can be used to accomplish numerous time consuming and difficult security audit and compliance tasks. These include:

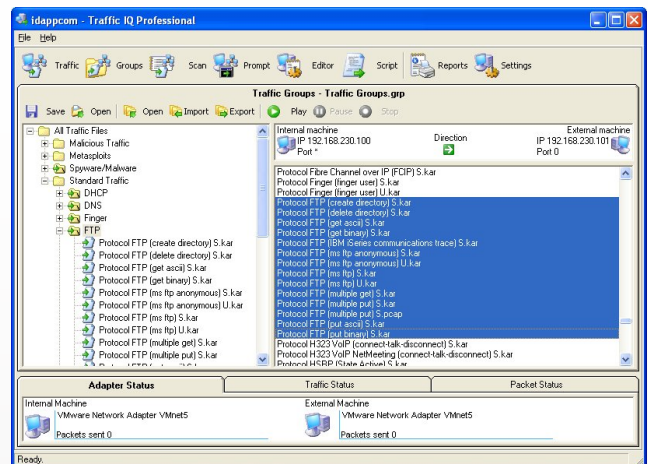

- Regulatory compliance validation and auditing
- Rule-based egress and ingress testing
- Recognition and response testing
- Signature development and fine-tuning
- Change control procedure verification
- Advanced penetration testing
- Application protocol and threat traffic scanning

Traffic IQ Professional can be used to assess, audit and test the behavioural characteristics of any non-proxy packet-filtering device including:

- Application layer firewalls
- Intrusion detection systems
- Intrusion prevention systems
- Routers and switches

Traffic IQ Professional - Network security assessment

Flexible Deployment

Traffic IQ Professional is a Microsoft® Windows based technology and can be deployed on the simplest entry-level laptops to the most advanced integrated appliances.

Ease of Use

Traffic IQ Professional makes complex auditing and testing scenario's simple with point and click graphical network settings and select and click traffic replay capabilities. The user does not need development or scripting knowledge to use it.

Traffic Library

Traffic IQ Professional is supplied with a fully maintained and extensive traffic library containing more than 1000 standard protocol and threat traffic files. The traffic library is updated regularly with approximately 100 new threat traffic files added each month, ensuring you are always up to date with the latest attack and exploit traffic.

Saves Time and Money

Traffic IQ Professional negates the need to:

- Change control procedure verification
- Advanced penetration testing
- run Unix operating systems
- download and compile live exploit code
- rely on untrusted open source tools
- build sacrificial or vulnerable hosts to enable you to assess your security devices

Organisations who use Traffic IQ Professional will benefit instantly from significant time and cost savings, enabling those resources to be reallocated to other projects.
